

POLAR BEAR IN THE DESERT

1. Download the bear and the desert pictures. Save them in your pictures folder.
2. While viewing the pictures folder, right click on the desert and bear pictures and choose "Edit with the GIMP" for each.

3. Using the "Fuzzy Select Tool" click on the white area surrounding the bear. This selects only the white area.

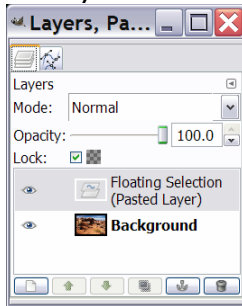

4. Reverse the selection since we want the bear selected. (Select->Invert)
5. Now copy the bear. (Edit->Copy)
6. Bring the desert picture/window to the foreground.

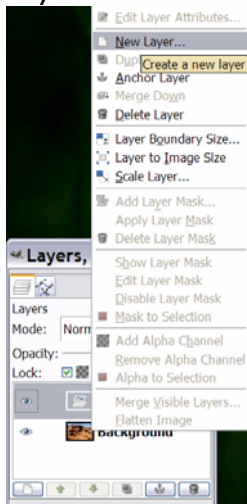

7. Now paste the bear into the desert. (Edit->Paste)

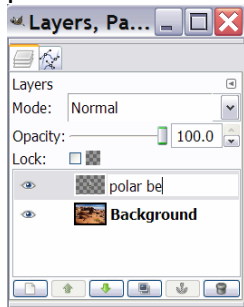

8. Now convert the floating selection (bear) to a proper layer by first making sure the layers window is visible. (Dialogues->Layers)

9. On the Layers dialogue right click on the floating selection and select "New Layer..."

10. Rename the layer. Double click on Pasted Layer and type “Polar Bear” and then press Enter.

11. Move the bear to the desired location by selecting the Move Tool and drag the bear making sure to position your mouse over the bear’s body while dragging.

12. Save the new picture as a GIMP image (XCF). (File->Save As...) Change the name to “Polar bear in the desert” and click plus sign beside “Select File Type (by extension)”. Then click “GIMP XCF image”.
